

Lead Testing Update

Oct. 21, 2016

Dear Greater Albany Parents and Staff:

The district has completed a second round of tests for schools that had elevated lead results in the first round of testing. The reports show that the repairs or replacements for those water sources reduced lead levels for most water sources.

There are still elevated lead levels in some water sources at the following schools:

- Calapooia Middle School
- Clover Ridge Elementary School
- North Albany Middle School
- South Albany High School
- Tangent Elementary School
- West Albany High School

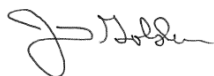

We are repairing or replacing any water source shows lead levels above the EPA lead action level of 20 parts per billion. Those sources will continue to be out of service until additional tests show that they are safe for drinking.

Additional information, reports and updates are posted on the water testing web page: at

<http://albany.k12.or.us/water-testing-information/>.

Thank you for your patience and understanding. Providing a safe learning environment is our top priority.

Sincerely,

Jim Golden, Superintendent
